Shortcut Functions for Contour and Intensity Settings

LP360, versions 2014.1 and above

Nancy Graham

December 1, 2014

Revision 1.0

With the newest release of LP360 (2014.1) we added shortcut functions for the Contour and Intensity buttons. Now, to easily get to the symbology adjustments for these features you can simply click the Contour or Intensity button while holding down the Ctrl key. These two buttons are located on the LP360 Toolbar. (Figure 1)

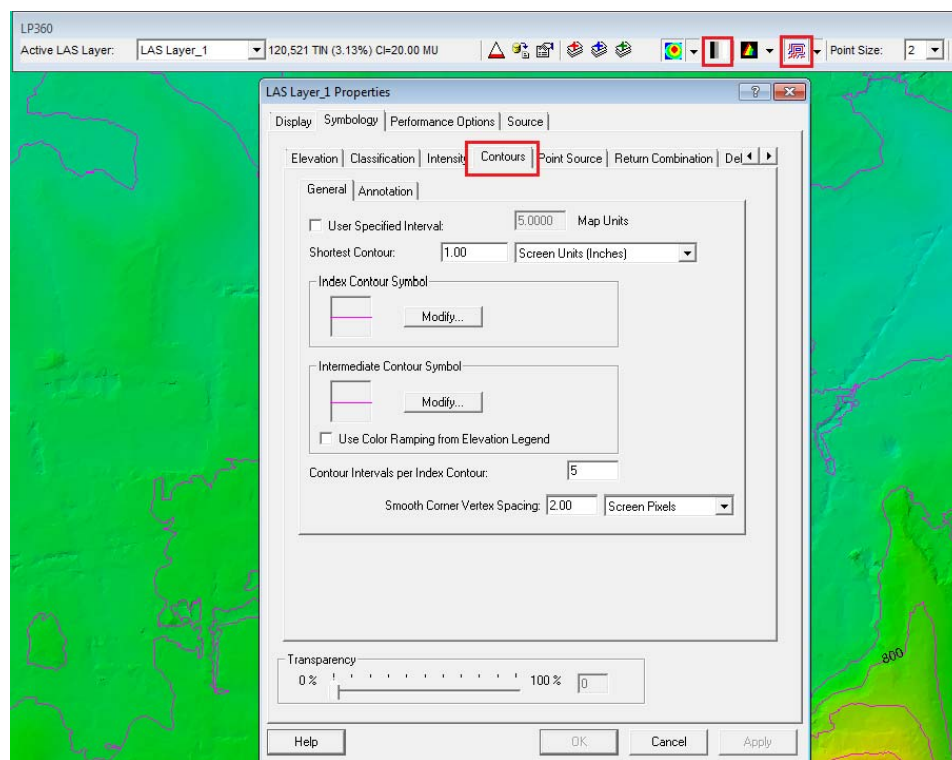

Figure 1 – Intensity and Contours buttons located on the LP360 toolbar and the Contours properties tab.

Prior to this release you could only get to the Intensity or Contour settings tabs, located on the Properties dialog, by clicking the LAS Layer Properties button  and then drilling down to the correct tab. Hopefully, this added functionality makes these necessary adjustments quicker and easier to achieve.
